

**For the food
industry**

Food grade paraffin

Paraffin is used in numerous branches of industry. It is, among others, one of the main ingredients of waxes intended for contact with food. These products are manufactured in accordance with the GMP (Good Manufacturing Practice) regulations applicable in the company with elements of the GHP (Good Hygiene Practice).

PRODUCT	MAIN APPLICATION	TECHNICAL SPECIFICATIONS
ALPACKWAX G	Wax for removing poultry feathers that are particularly difficult to remove, such as geese and ducks	Current Safety Data Sheets and Information Sheets as well as Technical Conditions of individual products are available on our website polwax.pl
WAX DROMA	Used in the poultry industry as a means of cleaning poultry carcasses from feathering	
DROMA WAX T		
DROMA WAX PLUS		
WAX RED	Used in the dairy industry to coat rennet ripening cheese	
WAX S		
WAX GREEN		

GMP stands for Good Manufacturing Practice

One of the requirements of the GMP is also control testing in the scope of purity and substance content in products. In addition, it is very important to use suitable food colouring when producing waxes intended for contact with food – especially for cheese. These colours must appear on the list of colours authorised for use in foodstuffs as required by Directive 94/36/EC of the European Parliament and of the Council of 30 June 1994 on colours for use in foodstuffs (as amended).

Products in this group are subject to regular control tests verifying the content of heavy metals and the content of PAHs and carcinogenic substances. In addition, products are tested for compliance with the quality standards of the United States Food and Drug Administration (FDA).

DEDICATED PURPOSE

products dedicated to specific applications

REGULAR CONTROL TESTS

checking products for quality that meets the required standards

DEDICATED PIGMENTS

use of the highest quality dyes intended for contact with food

FCM/GMP

some products intended for direct contact with food

Product suitability guarantee

The guarantee of suitability of individual products applies only to physical and chemical parameters and is counted from the date of sale. Detailed parameters are specified in the technical conditions available at polwax.pl

Storage method

The products should be stored in closed packages, protected against direct sunlight, moisture and mechanical impurities, away from heat sources. In addition, the technical conditions include information on the appropriate storage temperature, as well as the possible shelf life of individual products stored in accordance with the guidelines.

Conditions of delivery

The products are manufactured in the Production Plant in Jasło (PL38200) and Czechowice-Dziedzice (PL43502). Possible collection by own transport on the basis of the FCA production plant. It is possible to organize transport by Polwax S.A. (based on CPT), after presenting a price offer including delivery costs to the customer's premises.

Orders and delivery schedules

Orders for full truck loads should be sent at least 7 days before the planned shipment of the product. In the case of larger quantities for regular collections, it is advisable to send a monthly collection schedule by the 20th day of the month preceding the month of delivery.
